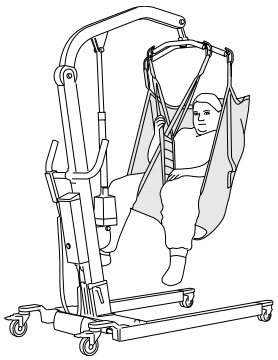
Baxter

LIFT SYSTEMS FOR BARIATRIC PATIENTS

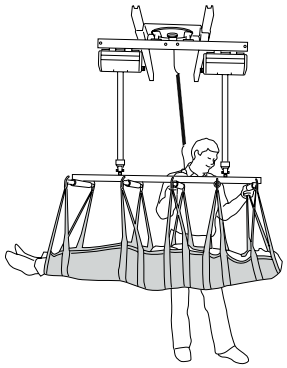
Plus size patients require special care. As the bariatric population grows, many hospitals are opening specialized bariatric care units—and equipping them with solutions designed for these unique patients.

Baxter has supported hospitals specializing in bariatric care for many years, developing a full line of lifts, aids and accessories designed to support patients of size. We understand what it takes to support the special care for your bariatric patients and we're here to help you deliver it—every step of the way.



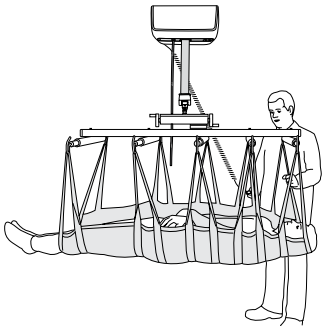
VIKING L/XL MOBILE LIFTS

Part of the versatile **Viking** series, the L and XL models are designed for bariatric patients and are able to lift up to 250 kg and 300 kg respectively (550 and 660 lb).



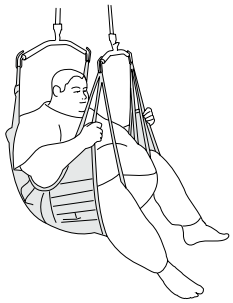
CEILING-MOUNTED OR FREE-STANDING ULTRATWIN SYSTEM

Available in straight rail or traverse models, the **UltraTwin** system consists of two **Likorall** motors which, together, offer a lifting capacity of up to 500 kg / 1,100 lb depending on lift system model and width. And with the UltraTwist accessory, you can get full (360°) rotation of the patient.



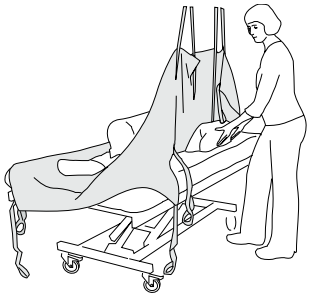
LIKOGUARD L AND XL

Our single-motor overhead lifts supports up to 363 kg / 800 lb depending on model, and features an emergency stop and lowering mechanism.



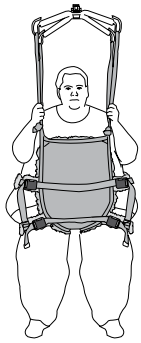
ULTRASLING

The **UltraSling** supports the entire back up to the shoulders to help assist with the lifting and transfer of your heavy patients in a seated position. Supports up to 500 kg / 1,100 lb and works with the **UltraTwin** system via permanent installation or freestanding design.



REPO SHEET ULTRA POSITIONING AID

Designed to help reposition your bariatric patients in bed by moving the patient up in bed and turning the patient with the aid of a lift. Supports a safe working load up to 500 kg / 1,100 lb.

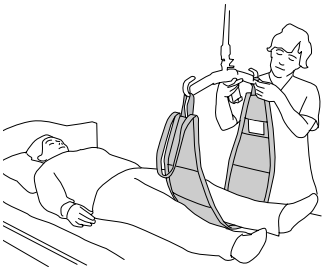


GAIT TRAINING WITH LIFTPANTS

The Ultra **LiftPants** sling, when used in accordance with the instruction for use, gives heavy patients the chance to practice standing and gait training with safety and comfort in mind. Designed to support patient weight range from 200 - 500 kg / 440 - 1100 lb.

POSITIONING AID

Placing a sling under patients of size can be difficult. The **HandySheet** is designed to help with this and can also be used for repositioning the patient in bed.



MULTISTRAP LIFTING ACCESSORY

The **MultiStrap** accessory is used for lifting and holding parts of the patient's body to facilitate examination, care and treatment. It can also be used to turn a patient in bed.
